Problem

- Students and fresh graduates struggle to create professional, ATS-friendly resumes
- Generic templates do not match specific job roles or industries
- Lack of awareness about required skills for targeted job roles
- Manual resume creation is time-consuming and error-prone

Solution

- AI-generated, role-specific resumes and portfolios
- Professional built-in resume templates
- Support for user-uploaded resume templates
- Skill gap analysis based on target job role
- Resume customization using AI prompts

Unique Value Proposition

An AI-powered resume and portfolio builder that creates role-specific, ATS-optimized resumes while identifying skill gaps to improve employability.

Unfair Advantage

Role-specific AI prompt engineering
Skill gap analysis integrated with resume generation
SDG-aligned employability focus
Custom template support
Ethical AI design and transparency

Customer Segments

- College students
- Final-year students
- Fresh graduates
- Internship and entry-level job seekers
- Early-career professionals

Key Metrics

- Number of resumes generated
- Resume completeness score
- User satisfaction feedback
- Reduction in resume creation time
- Skill gap recommendations generated

Cost Structure

- No direct monetary cost in prototype phase
- Indirect costs:
- Development time
- Free-tier AI computation
- Internet and infrastructure usage
- Future costs:
- Cloud hosting
- AI API usage
- Maintenance and scaling

Channels

- Social Media
- Email
- Paid Social Media
- Influencers
- PR

Revenue Streams

Currently non-commercial (educational prototype)
Future possibilities:

- Premium resume templates
- Resume review services
- Subscription-based career tools
- Institutional licensing (colleges/training centers)
